Oda

French Stone in Ceramics
Piedra Francesa en Cerámica

· Inspired by French stones, it comes in three colours and formats up to 120x270cm in Livingceramics and 163x324 in Lithotech technical stone. and 6mm, 9mm, 12mm and 20mm thick. Thanks to this wide range of possibilities, up to 15 varieties of cladding can be chosen based on the aesthetics of this stone with fossil markings.

· Oda uses 3D.FIT technology, a unique technique on the market that ensures that graphics and relief are in total harmony, paying the truest possible tribute to the natural stone.

· Oda is a collection available for cladding, flooring, technical stone, washbasins and countless special pieces

[3D.FIT: technology on the market with which graphics and relief coincide]
The collection is based on 3D.FIT technology, unique on the market and improved year after year as a result of constant research and the search for perfection in contemporary surfaces. The 3D.Fit technology ensures that the graphics and the relief of the piece match perfectly, just as the natural material does. This achieves the efficiency and performance of the ceramic material with an aesthetic as close as possible to the natural material.

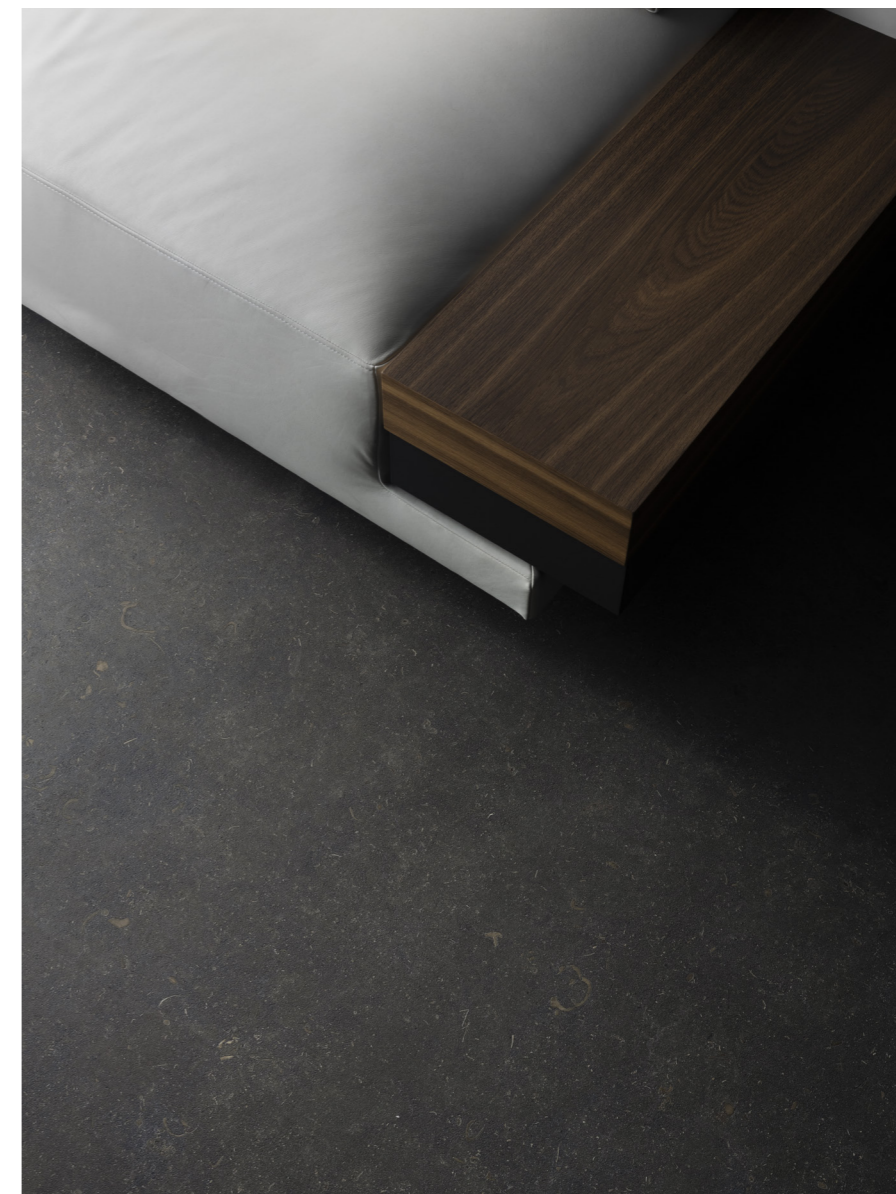

[Great versatility, it can be used in an infinite number of rooms and uses] The formats range up to 120x270cm to avoid joints as much as possible. The thicknesses for cladding range from 6mm to 9mm and are available in Natural, Honed, Soft Textured and Horizon (new digital relief available in 120x270cm slabs). Therefore, with Oda, practically all the needs of a project are covered, whether in wet or high traffic areas, in rooms that seek a twist with exquisitely detailed decorations or in corners where naturalness prevails. Thus, the aesthetic harmony is total.

Aesthetics:

[Contemporary version of French stone] Oda is inspired by the typical stones of the west coast of France, rich in fossils with very marked organic shapes and in different sizes and intensities. The colours, timeless and inspired by stone, allow the fossils to stand out thanks to their chromatic and nuanced richness. The result is a contemporary collection with a touch of history that gives it a unique charm.

Gubi

Microcement in Ceramics
Microcemento en Cerámica

· One of the best known Livingceramics collections. Inspired by microcement, it is now updated with new colours and new technologies from the firm: 3D.Fit.

· The collection inspired by microcement, has four colours and formats up to 120x270cm. and 6mm, 9mm, 12mm and 20mm thick.

· Gubi uses 3D.FIT technology, a unique technique on the market that ensures that graphics and relief are in total harmony, paying the most faithful possible tribute to natural stone.

· Gubi is a collection available for cladding, flooring, technical stone, washbasins and countless special pieces.

Gubi is the most contemporary version of microcement and one of the most valued by architects and interior designers. It is now renewed with two key points:

1. The inclusion of 3D.Fit technology. Thanks to this digital relief technology, the graphics and the relief match perfectly and a finish as faithful as possible to the microcement is achieved.

2. The update of colours: Ice, light, greige and cloud. Four colours designed to strike a balance between timelessness and modernity, with shades that flood the spaces with light.

Ductile Reliefs

The best known collection of Livingceramics and Lithotech. A basic for professionals looking for stony inspiration full of hyper-realistic details and textures. A collection that is now renewed with the new Ductile Reliefs: they are made of our innovative Ductile material. The base is 9mm thick. The main feature of Ductile is that thanks to its innovative composition, it is a lighter ceramic that is easier to handle and lay. The size is 60x120, a special large format that achieves continuous surfaces with fewer joints.

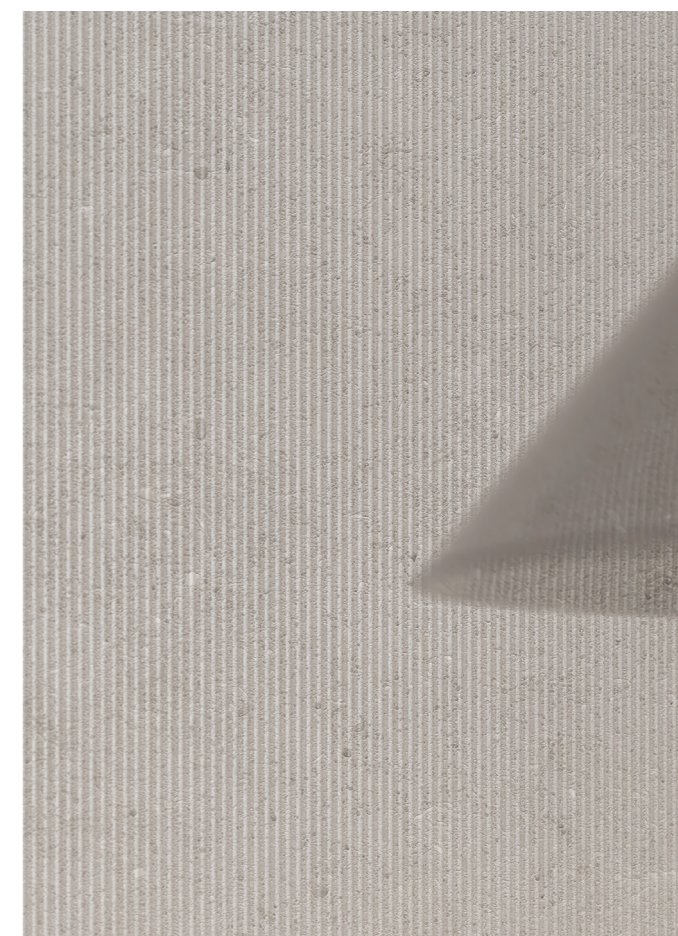

New reliefs: Lane and Land.

CUSTOM DESIGN HUB

Creative freedom and accuracy on plan. Craftsmanship and technology. Custom Design Hub was created to unite totally different perspectives of design, but together they achieve a perfect match. Our workshop is born as a meeting point between your most demanding bespoke projects and our experience in the design and manufacture of bespoke pieces. We focus on establishing a continuous dialogue with the professional from the initial approach, through the design, the handcrafted manufacture in our workshop and the final advice. In this way we give the handmade product the value it deserves as a synonym of exclusivity and authenticity. The result will be unique pieces on the market, with impeccable finishes, and totally adapted to the functional, spatial and aesthetic needs of each project. To achieve this, we combine two key parts: on the one hand, the high quality and differentiation of our ceramic surfaces. On the other hand, the expertise of a team that combines exquisite craftsmanship and the control and intelligent use of the latest technology to ensure pieces that exude elegance and quality while being functional for the project for which they are intended. Because unique projects require unique solutions, Custom Design Hub is the perfect ally to make them a reality.
